PRODUCT OVERVIEW Xn Hosting Solutions

Affordable, secure, scalable and resilient solution, across all services.

PRODUCT OVERVIEW **Xn Hosting Solutions**

Xn Leisure's fully UK-based hosting services offer advanced digital capabilities. ISO 27001 accreditation guarantees 100% uptime, ensuring secure, reliable and highly efficient service for our applications and web-based solutions. The recent advancements in server virtualisation are a huge leap forward, providing server consolidation, image-based backup, simplified disaster recovery and cloud based coverage in a cost-effective package.

Moving to a private cloud using virtual private server (VPS) services has never been easier to set up and provides a perfect solution to run a range of applications without the need for a large capital investment. VPS technology has quickly become the affordable and scalable solution of choice for many industry leaders.

What can the product do for you?

Our data centre partners, Rockford IT, actively monitor our services and alert the help desk to any faults or changes in the facility 24 hours a day. Our team provide peace of mind with a 4-hour response time for all components including UPS devices, generators, air conditioning facilities, electrical systems and fire protection units.

Real-time alerts on backups, server health, service-level agreement compliance and performance trend analysis services are provided as standard. These features allow our team to deal proactively with network and system issues, spotting any potential problems before they occur. Advanced Fire Suppression Systems detect and extinguish any potential fire hazards, preventing any disruption of the hosted systems.

Xn Leisure use the latest in Virtual Machine Server technology. Our advanced systems provide lower running costs, improved resilience and protect clients from hardware failure through a robust and flexible backup system with comprehensive disaster recovery plans. Environmentally-friendly data centres boast the latest security and high-speed connectivity, together with 24-hour manned security, CCTV, monitored intruder alarms and secure restricted access. Xn goes the extra mile to provide state of the art features and ensure the highest possible standard of hosting facilities.
